Earol® is a simple and effective method to soften and remove ear wax naturally with olive oil. Suitable for all age groups and easy to use, **Earol®** offers an effective method for instilling olive oil to soften compacted ear wax.

Earol® has some unique features:

- Larger bottle and actuator - making **Earol®** easy to use, especially for those with less dexterity.
- Tapered actuator - ensuring that it has limited access to the auditory canal to avoid any damage to the delicate mechanisms of the ear.
- Direct mist spray - administering the correct amount of olive oil to soften the ear wax without any wastage.
- 10ml bottle - allowing for both ears to be treated twice a day for 14 days.
 - bottle and label are transparent providing visibility of the oil inside and an indication of the amount of oil remaining.
 - in preparation for syringing, the NHS now recommends that olive oil is instilled into the auditory canal to soften ear wax. **Earol®** has been specifically designed to simplify this process.
